PLANNING YOUR APPOINTMENT TIME: A dog's pupils start constricting again within 2-3 hours after drops so dogs with later ring times could be examined first thing in the morning. Pupil dilation does not affect the vision in dogs like it does humans because they do not accommodate (use the muscle in the iris to fine focus their vision). It can make some dogs a little light sensitive until the pupil can constrict some which is more of concern at outdoor shows on sunny days.
